DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group I in Paper No. 10 is acknowledged.

Claims 12-44 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim.

Election was made **without** traverse in Paper No. 10. The response has cancelled claims 12-44.

Pending claims 1-11 & 45.

Specification

2. The specification contains references to US serial applications. Updating of their status is required. (see e.g. page 7, line 26).

Drawings

3. The proposed drawing correction and/or the proposed substitute sheets of drawings, filed on 10/5/01 have been approved. A proper drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The correction to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 9 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

A) Claim 9 is indefinite because the term “independently selected” is unclear. It is unclear as to what limitation the phrase imposes on the claim.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claims 1-11 are rejected under 35 U.S.C. 102(e) as being anticipated by Bauer

(US6,096,497 Aug 1, 2000).

Art Unit: 1656

Bauer et al teach a biosensor composition (see whole doc. esp. abstract) which comprises a metallic surface (see col.5 line 33) and asymmetric monolayer forming species with disulfide linkage (see (col. 6 line 33-35), a monolayer forming species of insulators (see col. 6 line 23-25) and an electroconduit forming species (see col. 6 line 55-60). They teach that the MFS may be alkyl or alkyl group of combination of long or short chain (see col. 6 line 9, 22). They teach that alkyl group of three carbons (see col.12 line 25). They teach functional groups help stabilize binding enzymes such as hydroxyl carboxylic and aryl groups. They teach that AG may be alkyl moiety of 6 carbons (see col. 6 line64).

The term “about” in claim 5 reads broadly and would encompass Bauer et al’s teachings.

SUMMARY

6. Claim 45 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. There is no prior art that teach or suggest the composition containing the claimed structure as shown in claim 45.
